This illustration shows a pet with long grey hair and a yellow collar, depicted as pregnant. The belly is very large and rounded. The pet is looking down at its belly. The background is a light pinkish-purple.

babies might put pressure on their lungs, making it harder to breathe

pet should rest at this stage

most pets will experience some sort of incontinence at this point

due date

breasts swell in preparation for milk production

This illustration shows a pet with long grey hair and a yellow collar, depicted as pregnant. The belly is large and rounded. The pet is looking down at its belly. The background is a light pinkish-purple.

increased belly size may make movement harder for most pets

will need to pee more often due to the fetuses constricting it.

around 25 weeks (6/7 months)

most male pets don't have a lot of breast tissue before pregnancy. this does not affect milk production, though.

This illustration shows a pet with long grey hair and a yellow collar, depicted as non-pregnant. The belly is small and flat. The pet is looking down at its belly. The background is a light pinkish-purple.

not pregnant

# PET PREGNANCY ANATOMY

angels are usually born without much issue, but due to how big demons are, it's almost impossible for the birth to happen without significant tearing on the pet's birth canal

pets with low reneration levels may need veterinary assistance to fix tearing post-birth

fetuses are enveloped in an egg-like sack, its colors can vary and depends on genetics.

most pets have their stomach and small intestines taken out, which leaves more space for their fetuses to develop

angel fetuses are half the size of demon fetuses. this pet is carrying one of each,

due date

around 25 weeks (6/7 months)

not pregnant
