SQUIDDO

BOOB experiment story

Yet again, Squiddo had been convinced to assist his scientist "friends" with their weird experiments.

So, uhm...
When are you gonna tell me exactly what this is for?

You're always so anxious!
Just relax, you'll find out soon enough!

And, yet again, he goes in without any idea of what is supposed to happen. This seems to be a pattern with them.

As the huge, thick tentacle slides deeper inside of him, Squiddo begins to feel himself fill up from the inside, instantly realizing what awaits him.

REALLY????

I told you didn't want to get tentacle eggs inside me again!!

Ugh, I should not have trusted you lot...

Don't worry, don't worry!!
This one doesn't make those huge eggs you hated, you'll barely feel the birth~

This does little to ease him, it's not the first time (not will it be the last) the scientists have purposefully kept the worst bits hidden from him.

His breasts start to swell
and he is sure something
isn't quite right.

wait, wait, wait!
This thing is putting
eggs in my boobs???

You're a smart one!
That is 100% correct!

We were worried those eggs wouldn't be
tiny enough but it seems they fit inside
your milk ducts just fine~

No!! Stop it!!
I don't want this!!
Get me out!!!

oh dear...
There are plenty of tiny eggs inside
of you already, even if we got you
out, you'd still incubate them!
You just gonna have to endure it~

Both his breasts and belly
grow to huge sizes.
Disturbingly, he really
feels no pain at all, just an
awfully pleasant warmth
inside of him.

You...
...You're all t-terrible!!

Funny how say that all the time
and yet you're still here....

Anyway, that's beside the point.

You shouldn't worry too much,
this species is particularly nice
to their hosts.

Apparently the mucus around
the eggs will coat your insides
and make you feel extra good.

You're feeling it already aren't you?
Is that why you're remarkably silent? Hahah

No...!

that's not...

The sensations are way too overwhelming for Squiddo and soon, he can no longer speak, only desperately whimper and moan.

Ah, it seems the little "babies" will be born soon!

I would apologize for how rancid the mucus smells but considering how far gone you are, I doubt you can even feel it...

By the way, we forgot to mention a small detail!
The tentacle beast is quite, uhm... protective of its hosts.

It will be a bit troublesome to take you out and we still need to run a few more tests, so we'll leave you here for a month or two, alright?

Each incubation takes about 10 hours so...
that should be about what?

150 incubations? Yea let's aim for that!
You'll probably be addicted to the pleasure the mucus gives you so you'll barely even feel time passing I bet.

Every single still
rational cell in Squiddo's
body squirms in
revulsion as gross,
slimy maggots climb out
of his abused,
stretched out nipples
and pussy.

No...

Please...

So gross..

Let me out...

We'll be monitoring you in the meantime.

Have fun, Squiddo!!

Of course, his pleas go
unheard and poor Squiddo
is kept in the tentacle pit
until he has given birth until
he reached the odd
number of 231 births. It
seems the tentacles really
didn't want to let its host
go and some "negotiations"
had to take place...

I think he can't hear us anymore, haha

THANK YOU FOR READING!

Author's note:

Canonically Squiddo doesn't have breasts or nipples but let's pretend otherwise for this story, ok?
